Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Assist Pranitha in developing a program that takes an integer N as input, representing the number of names to be read. Then read N names and store them in an ArrayList. Finally, input a search string and output the frequency of that string in the list of names.

Note: Some parts of the code are provided as snippets, and you need to complete the remaining sections by writing the necessary code.

Input Format

The first line of input consists of an integer N, representing the number of names to be read.

The following N lines consist of N names, as a string.

The last line consists of a string, representing the name to be searched.

Output Format

The output prints a single integer, representing the frequency of the specified name in the given list.

If the specified name is not found, print 0.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

Alice

Bob

Ankit

Alice

Pranitha

Alice

Output: 2

Answer

```
import java.util.ArrayList;
import java.util.Scanner;

class NameFrequency {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int N = sc.nextInt();
        sc.nextLine();
        ArrayList<String> names = new ArrayList<String>();
        for (int i = 0; i < N; i++) {
            names.add(sc.nextLine());
        }
        String target = sc.nextLine();
        int count = 0;
        for (String s : names) {
            if (s.equals(target)) {
                count++;
            }
        }
        System.out.println(count);
    }
}
```

```
    }  
  }  
  System.out.println(count);  
  sc.close();  
}  
}
```

Status : Correct

Marks : 10/10
